Acknowledgement

The success and final outcome of this project required a lot of guidance and assistance from many people and we are extremely fortunate to have got this all for our project work. Whatever we have done is only due to such guidance and assistance and we would not forget to thank them.

We respect and thankful to K. S. School Of Business Management, for giving us an opportunity to do the project work and providing us all support and guidance which made us completes the project on time. We are extremely grateful to project guide for providing such a nice support and guidance though she had busy schedule.

We would like to express our gratitude towards Course coordinator Department and our project mentor for their kind co-operation and encouragement, which helped us in this project.

Chapter :-1 Introduction

This project is a web-based system for Timetable management system. Many schools and colleges are facing the problem of making timetable manually. So, it requires more time and efficiency. Thus, a timetable management system helps make it simpler to create timetables and schedule plans as per the college resources. This system is a great help for those who have several tasks at hand and creating a timetable on paper sounds like a tedious task, or if they need a timetable at hand whenever they want. So, this system helps to generate automated timetable making.

1.1 ORGANIZATION PROFILE :

COLLEGE NAME:-	K. S. SCHOOL OF BUSINESS MANAGEMENT
ADDRESS:-	K. S. SCHOOL OF BUSINESS MANAGEMENT GUJARAT UNIVERSITY CAMPUS, AHMEDABAD, GUJARAT-380009.
EMAIL ID:-	ksschool31@yahoo.co.in
CONTACT NO:-	+ (079) 26305972
ORGANIZATION WEBSITE:-	YES

1.2 SYSTEM DETAILS:

1.2.1 EXISTING SYSTEM:

A college have online website but don't have any automated system for making timetable. They make timetable manually post the pdf of their timetable on the college website. Thus, they are facing some problems of this existing system like:

- As we discussed earlier that manual maintenance of a Time Table Management System is a tedious job.
- Manual maintenance of databases of items, time table processing is a time taking process.
- It is very complex thing to making timetable manually.
- Sometimes human errors are there.

1.2.2 PROPOSED SYSTEM:

In the Proposed system we providing facility of generation of automated timetable for the college. Thus "Timetable Management system" is aim an automated system which generates timetable according to the data given by the admin. The system requires to enter all the details about subjects, timing of labs, total no. of period, workload of the faculty etc. Then the application will generate the timetable according to your requirements.

1.3 SCOPE OF THE SYSTEM:-

This system helps students to find proper timetable with the accuracy and faculty is clear about their time table if there is any change in the timetable, they update the timetable. Our aim is to avoid miscommunication between student and faculty regarding timetable.

- This system is limited to the college.
- Faculty and admin can create/update the timetable.
- Student only view the timetable.
- Lab operator has only privilege to view the timetable.
- Faculty can view class wise timetable and faculty time table.

1.4 OBJECTIVES:-

1. Convenience:

The most obvious and most potent reason behind having a timetable management system is convenience. Instead of creating a timetable on paper that can get lost or misplaced, and the creation which is time-consuming, a timetable maker makes the whole process convenient for the students and faculties.

2. Saves Time:

One of the main complaints about creating a timetable is that it takes a lot of time to prepare. This is because they have to create a format for the same and then fit all the subjects/activities for the same on it. So, this system helps to create pre drafted timetable and admin/faculty can easily create/edit it.

3. Enables Easier Work Distribution for Teachers:

With the help of the timetable, the co-ordinator can keep track of the workload assigned to each teacher working under them. It effectively gives a summary of the work given to them. The co-ordinator will get to know, at a glance, the amount of work that every teacher is supposed to do hence avoiding the allotment of too much or too little work to one teacher.

4. Helps Allocate Adequate Time for Different Subjects:

The timetable offers space for emphasis on subjects and activities in the college as per their relative difficulty or importance. This is essential for the all-around development of the pupils. This ensures that while the more important activities and subjects get more attention and time, the less important ones are not neglected at all.

5. Easily change in the timetable:

A well-planned timetable indicates what kind of curricular and co-curricular activities are being conducted in school at a particular time and place. It also shows which teacher will be taking the class or who is presiding over the activities as they are being conducted.

6. Helps Plan out the Day/Month/Year:

In the short term, creating a timetable is one of the best ways to plan out lessons for students and help them plan out their day effectively. However, the use of timetables does not stop here. Timetables are used by teachers and administrators too. Teachers use timetables to make sure they know which class to go to after each one, while administrators use timetables to make sure that every activity in the school is taking place as planned.

Chapter:-2 Proposed System Requirement Gathering

Every Software project goes through a phase called Requirements Gathering. A successful project begins with a difficult set of discussions on what should be done. It's the major responsibility of IT Business Analyst to gather the Requirements from the clients. Getting the correct requirements from the client can often be one of the biggest hurdles in any software project. If Business Analyst gathers correct and complete requirements, the projects will yield richer crops.

2.1 STAKEHOLDERS OF THE SYSTEM:-

1. ADMIN:-

- Admin can **make the timetable** according to year wise and available class and lab resources.
- Admin can **modify the timetable** according to extra-curricular like seminar or day celebration or the leave of faculty and arrange proxy lecture.
- Admin can **distribute the subject** to the faculty and load timetable year wise.
- Admin **can manage the workload** of the faculty.
- Admin **avoid conflict of the faculty** by assigning one lecture at the time.
- Admin **can make a Timetable pre drafted timetable**.
- Admin **can upload the Timetable**.
- Admin **can download the Timetable** in Pdf format.

2. Faculty:

- Faculty can **check subject, view subject distribution and also check year wise details**.
- Faculty **can view own and full timetable and also class and year wise timetable**.
- Faculty **can edit/update the Timetable** and arrange the extra lectures.
- Faculty **can make a Timetable pre drafted timetable**.
- Faculty **can download/upload the Timetable** in Pdf format.
- Faculty **can view their workload**.
- Faculty **can check conflict of lecture**.

3. Student:

- Students **can view the timetable** (Regular lectures, lab, extra lectures).
- Students **can download the timetable** in Pdf format.

4. Lab Operator:

- Lab operator **can view and download** the timetable in Pdf format.

2.2 REQUIREMENT GATHERING TECHNIQUE USED:-

Requirement Gathering Technique is critical to necessary facts to build the require database application. These facts are capture by using fact-finding techniques.

⇒ Observation :-

The observation is the best technique to detect the problems and make solutions.
For Timetable management system college facing following problems:

❖ Takes lots of time:

When you are creating timetable manually then it takes lot of time and effort for creating the timetable.

❖ Mismanagement:

If timetable contains any human error, then it may lead to mismanagement.

❖ Increase Workload:

For making non-auto generated timetable it increases the workload of the person who make the timetable.

❖ Takes more time to update timetable:

For manual timetable creation it takes more time to update the timetable. Sometimes it become hectic for student and faculty.

❖ Decrease productivity:

Manual timetable decreases productivity of the person because it gives more stress.

2.3 CONSOLIDATED LIST OF REQUIREMENTS:-

- System must be user friendly.
- System must be interactive.
- System should have security.
- System must provide Real time updates.
- It should be easily customizable.
- It should be considered college regulations.

2.4 PROJECT DEFINITION:-

"Timetable Management system" is provide an interactive and user-friendly environment which aim an automated system which generates timetable according to the data given by the admin. The system requires to enter all the details about subjects, timing of labs, total no. of period, workload of the faculty etc. Then the application will generate the timetable according to your requirements.

Chapter:- 3 System Management and Planning

Developing any system for achieving the purposes the first step is analysis, planning according to requirement which we gathered from various sources and using different techniques in system management and planning following thing is included:

3.1 FEASIBILITY STUDY :-

The main aim of the feasibility study is to determine that it would be financially and technically feasible to develop the System. The purpose of feasibility study is not to solve the problem, but to determine whether the problem is worth solving.

3.1.1 TECHNICAL STUDY:-

The Technical Feasibility study compares the level of technology available in the software development firm and the level of technology required for the development of the product. Here the level of technology consists of the programming language, the hardware resources, other software tools etc. Internet is required to the system.

In Our System Technical Feasibility Is Ensured in The Following Factors:

- Availability of Servers of the JAVA.
- One of The Most Effective Quality Assurance Mechanisms Can Be Applied from The Inception of a Project with This.
- The Hierarchy of Technical work within the Software Process is Activities, Economizing Actions Populated by task
- The facility to produce output in given time.
- Response time under certain condition.
- A valid verified user ID is required to faculty and admin of the system.
- It just requires windows operating system and normal browser to use our system.
- No extra ordinary gadgets are requiring for our system.

3.1.2 ECONOMICAL STUDY:-

The Economic Feasibility Studies Evaluate the cost of the software development against the ultimate income or benefits gets from the developed system.

There must be scopes for profit after the successful Completion of the project.

- Our system is not much costly to develop.
- It is easy to understand therefor there is no need to appoint any operator to use the system.
- Organization is ready to invest in proposed system because it is being developed in latest Technology and will be very fast for the users to transfer or share the information using the system.
- Additional Investment is not needed in developing tools because of JAVA language.

3.1.3 OPERATIONAL STUDY:-

Operational Feasibility is a Measure of how we will propose system solves the problems, and takes advantage of the opportunities identified during scope of definition and how it satisfies the requirements identified in the requirements analysis phase of system development. It is checked that The Systems Actually Can Be Useful When Implemented.

=> Our System Is Operationally Feasible in The Following Ways:

- Our System is very easy to use without any training.
- Easy to Operate.
- Our system having common language So Learners Can Easily Understand the System, So It Provides Ease of Access.

3.2 HARDWARE – SOFTWARE REQUIRMENT:-

❖ HARDWARE REQUIREMENT:-

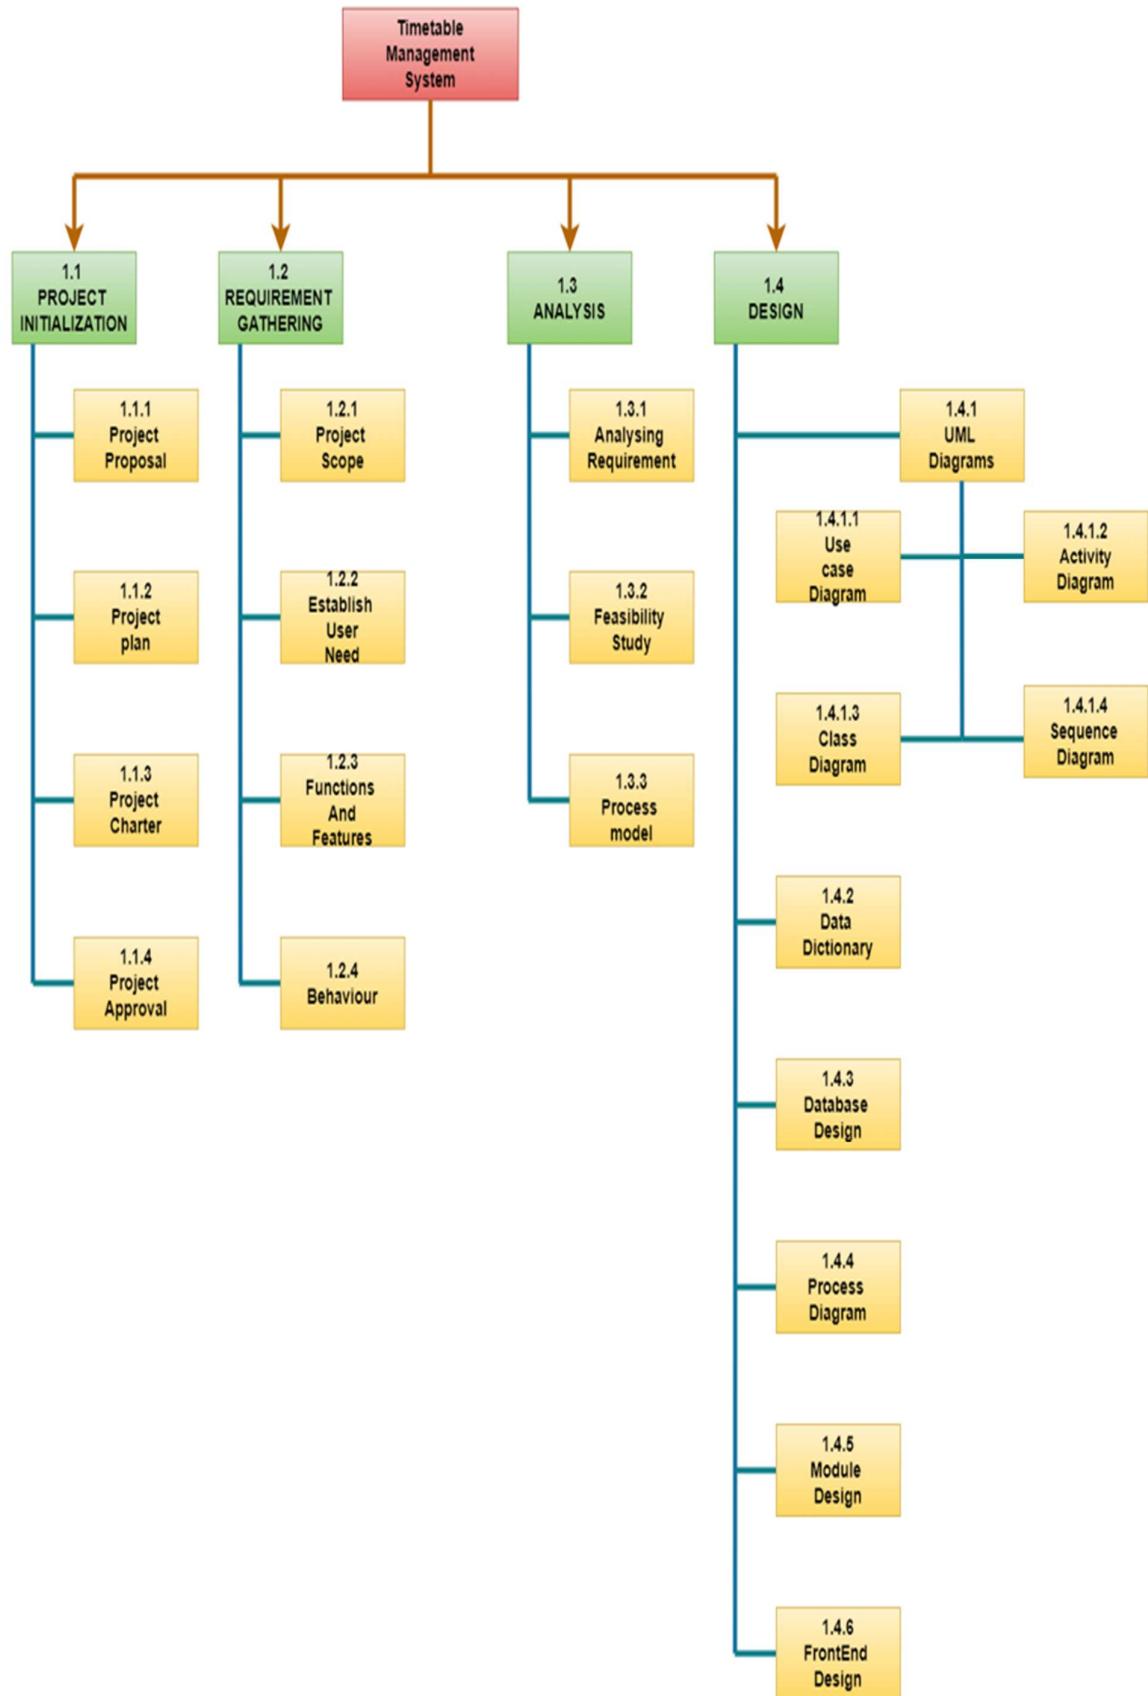

PROCESSOR	QUAD CORE OR HIGHER
HARD-DISK	Minimum 500 GB
RAM	Minimum 2 GB

❖ SOFTWARE REQUIREMENT:-

FRONTEND	<ul style="list-style-type: none">HTMLCSSJAVASCRIPTBOOTSTRAP
BACKEND	<ul style="list-style-type: none">JAVA
DATABASE	<ul style="list-style-type: none">MYSQL
OPERATING SYSTEM	<ul style="list-style-type: none">WINDOWS 7 OR MORE
TOOLS	<ul style="list-style-type: none">Eclipse
BROWSER	<ul style="list-style-type: none">CHROME

3.3 SYSTEM PLANNING :-

3.3.1 WORK BREAKDOWN STRUCTURE:-

3.3.2 GANTT CHART:-

Gantt charts are useful for planning and scheduling projects. They help you assess how long a project should take. Determine the resources needed and plan the order in which you will complete tasks. They are also helpful for managing the dependencies between tasks.

Activities	June	July
Project scope		
Research		
Requirement gathering		
Analysis		
Design		
Coding		

3.4 PROCESS MODEL:-

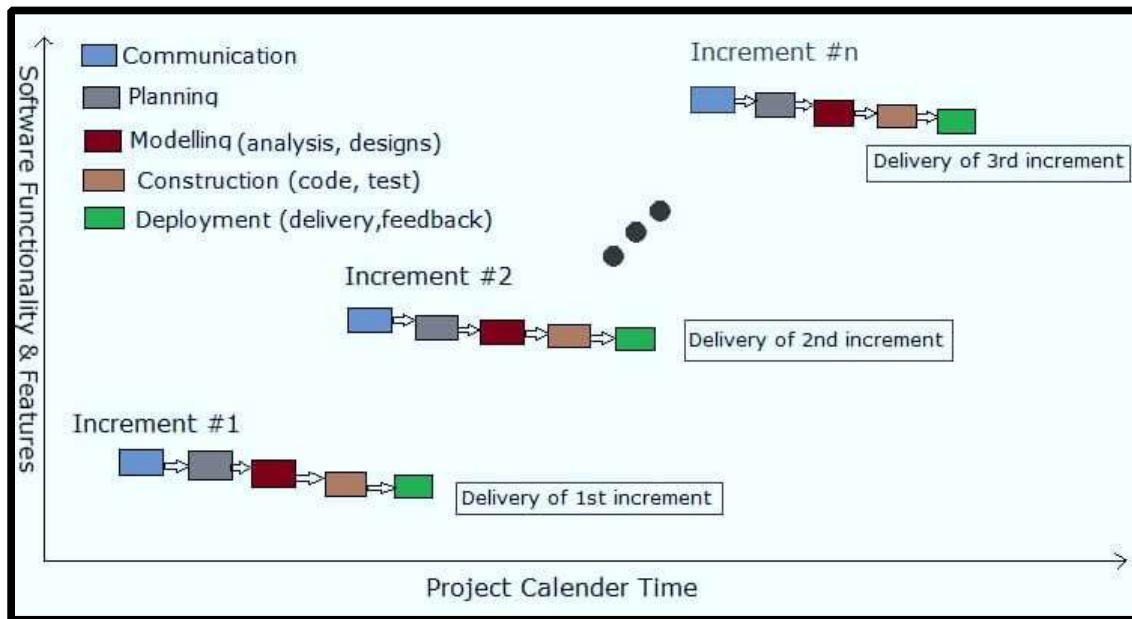

As new requirements can arise in future incremental models are used. With the help of it we can fulfil maximum user requirements. In every increment the needs of the client are kept in mind and more features and functions are added. These increments Form a base for customers evaluation. Many features can be added after the development of the system that serves the main purpose. If there is less number of employees to work on the project Incremental Development model is very useful to complete the project before the deadline.

➡ INCREMENTAL MODEL:

Incremental Model in software engineering is a one which combines the elements of waterfall model which are then applied in an iterative manner. It basically delivers a series of releases called increments which provide progressively more functionality for the client as each increment is delivered.

In Incremental Model of software engineering, waterfall model is repeatedly applied in each increment. The incremental model applies linear sequences in a required pattern as calendar time passes. Each linear sequence produces an increment in the work.

The first increment is often a core product where the basic requirements are addressed and the supplementary features are added in the next increments. The core product is used & evaluated by the client. Once the core product is evaluated by the client there is plan development for the next increment. Thus, in every increment the needs of the client are kept in mind & more features and functions are added and the core product is updated. This process continues till the complete product is produced.

The increments earlier to the main increment are called as "stripped down" versions of the final product. These increments form a base for customer evaluation. On this basis client can suggest new requirements if required.

→ ADVANTAGES OF INCREMENTAL MODEL :

- Initial product delivery is faster.
- Lower initial delivery cost.
- Core product is developed first i.e., main functionality is added in the first increment.
- After each iteration, regression testing should be conducted. During this testing, faulty elements of the software can be quickly identified because few changes are made within any single iteration.
- It is generally easier to test and debug than other methods of software development because relatively smaller changes are made during each iteration. This allows for more targeted and rigorous testing of each element within the overall product.
- With each release a new feature is added to the product.
- Customer can respond to feature and review the product.
- Risk of changing requirement is reduced.
- Work load is less.

➡ DISADVANTAGES OF INCREMENTAL MODEL:-

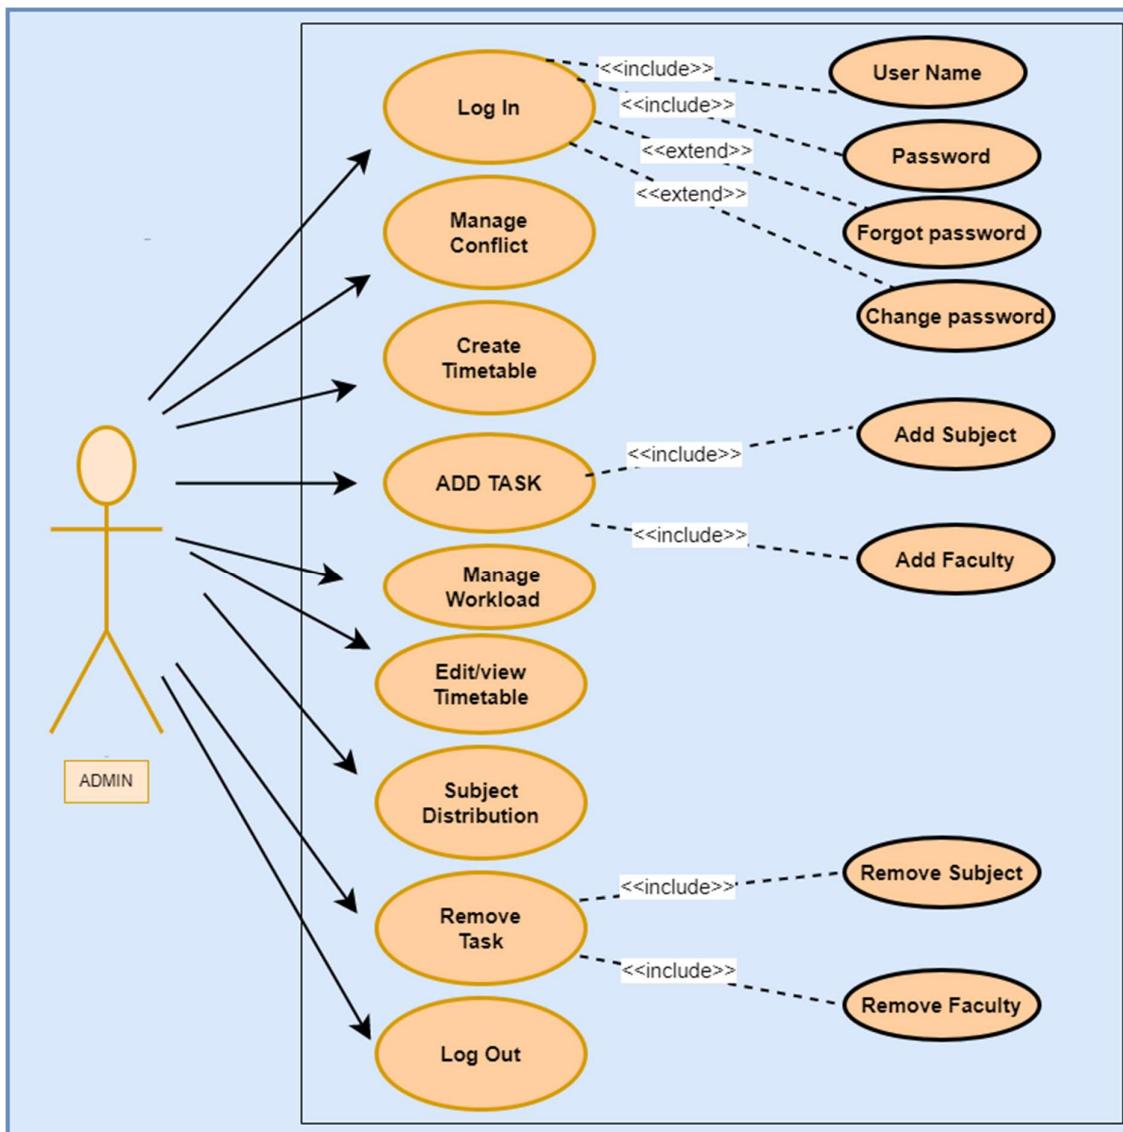

- Requires good analysis.
- Resulting cost may exceed the cost of the organization
- Each phase of an iteration is rigid and do not overlap each other.
- As additional functionality is added to the product, problems may arise related to system architecture which were not evident in earlier Prototypes.

Chapter:- 4 System Analysis And Design

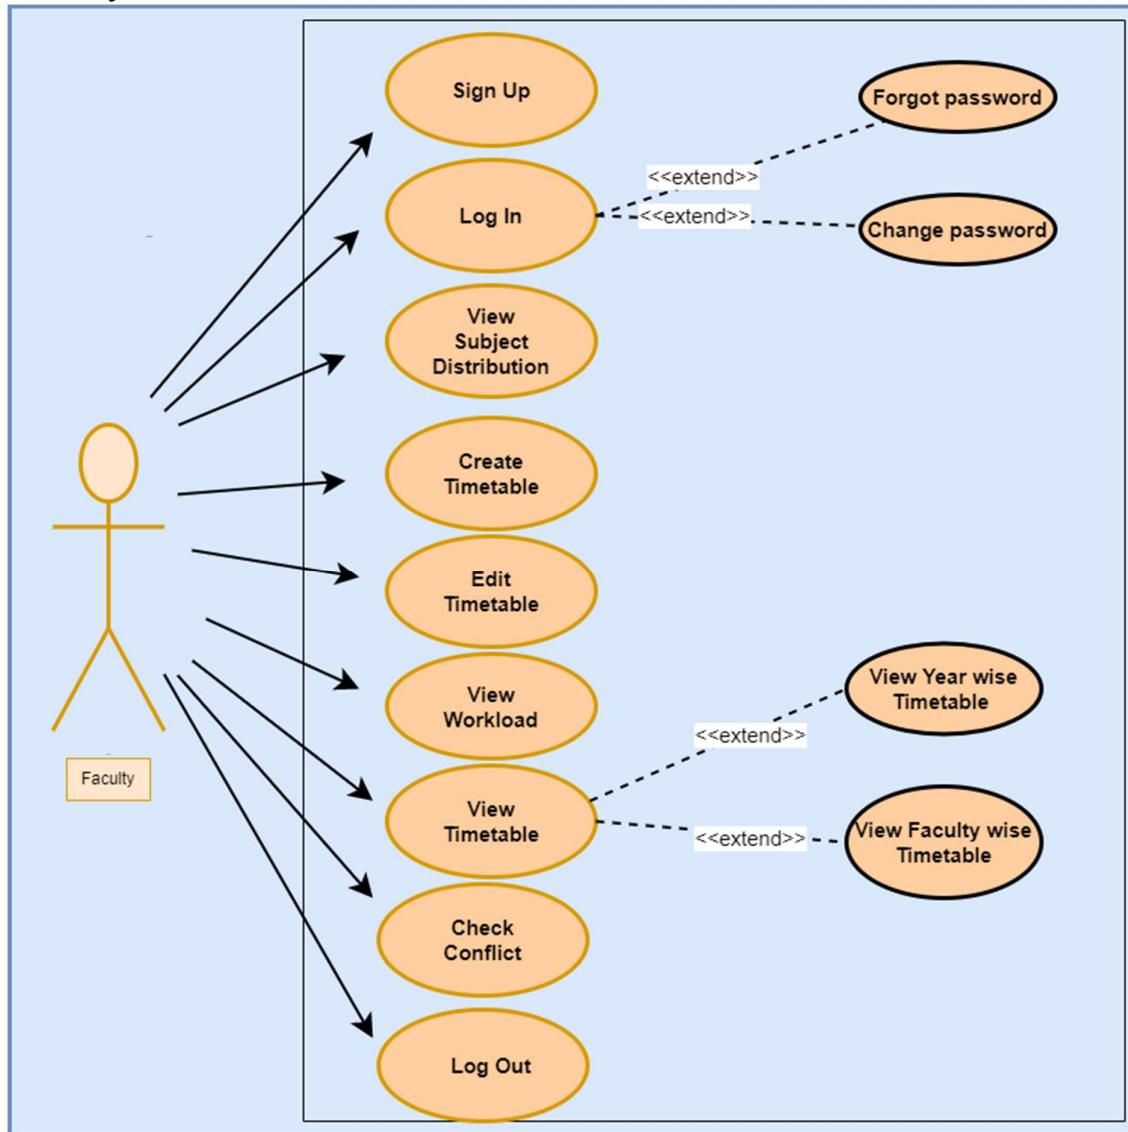

4.1 UML (Unified Modeling Language) :-

1) Use Case Diagram:-

4.3 DATA DICTIONARY :-

1) Admin :

Field Name	Data Type	Size	Constraint	Description
Admin_e-mail	Varchar	30	Primary Key	Admin Mail id
Admin_Password	Varchar	15	Not Null	Admin Password

2) Faculty:

Field Name	Data Type	Size	Constraint	Description
Faculty_id	Varchar	30	Primary Key	Faculty Id
Subject_id	Integer	30	Foreign Key	Subject_Id
Faculty_name	Varchar	50	Not Null	Faculty Name
Faculty_Password	Varchar	15	Not Null	Faculty Password
Subject_choice	Varchar	90	Not Null	Subject choice of faculty

3) Timetable:

Field Name	Data Type	Size	Constraint	Description
Timetable_id	Varchar	6	Primary Key	Unique Timetable Id
Subject_id	Integer	30	Foreign key	Subject Id
Faculty_id	Varchar	30	Foreign Key	Faculty Id
Subject_name	Varchar	30	Not Null	Subject Name
Faculty_name	Varchar	50	Not Null	Faculty Name
Sem	Integer	15	Not Null	Sem in which Subject is teach
Date	Date	-	Not Null	Date of Timetable
Time	Integer	8	Not Null	Time of Lecture
Division	Varchar	5	Not Null	Division of Year

4) Subject Distribution:

Field Name	Data Type	Size	Constraint	Description
Subject_id	Integer	30	Primary Key	Subject Id
Faculty_id	Varchar	30	Foreign key	Faculty Id
Workload	Integer	20	Not Null	Total hour of workload
Subject_name	Varchar	30	Not Null	Subject Name
Sem	Integer	15	Not Null	Sem in which Subject is teach
Subject_Credit	Integer	15	Not Null	Credit score of Subject

5) Lab operator:

Field Name	Data Type	Size	Constraint	Description
Lab-operator_id	Varchar	10	Primary Key	Lab-operator Id
Lab-operator_password	Varchar	12	Not Null	Lab-operator Password

About K.S.School

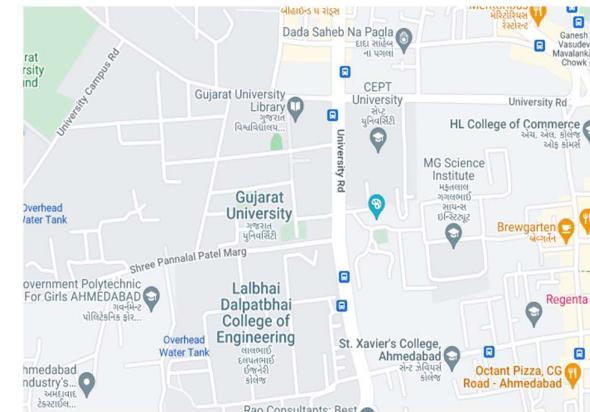

K. S. School of Business Management is one of the pioneer institutes offering Integrated MBA and MSc (Computer Applications & Information Technology) in India. Established under the aegis of Gujarat University, KSSBM started with five year integrated programme in MBA in 1993, followed by five year integrated programme in MSc (CA&IT) in 1998. Both the programmes have grown in size and stature, attracting Gujarat state's young budding students after their 12th standard from all walks of life.

11) Remove Subject:

The screenshot shows a web application interface for managing subjects. At the top, there's a navigation bar with links for HOME, CONTACT, ABOUT, SIGNUP, and LOGOUT. Below the navigation is a row of buttons: Add Subject, Subject distribution, Create timetable, Edit timetable, View timetable, and Remove. The main content area is titled "K S School Of Business Management" and contains a sub-section titled "Remove Subject". This section features a table listing 41 subjects, each with a "Delete" link. The table columns are labeled "sub", "Subject Name:", "Sem:", and "Delete". The subjects listed include FCO, FOP, MC, FAM, FOM, CS, IOA_P, FOP_P, DBMS, COSM, DS, DM, SSD, DS_P, OOP, OS, OOP_P, FE, SE, CG, OOPJ, OOPJ_P, TC, CLIP, CG_P, ADDBMS, SPM, AI, ERP, OR, AN, AI_P, IP, NA, GIS, DC, CC, MAD, MAD_P, DOS, and ES.

sub	Subject Name:	Sem:	Delete
1	FCO	1	
2	FOP	1

Chapter 6:Testing

1) Test Case (For Registration) :

=> If user will not fill any of the field , then a message will generate for inform that fill out this field.

The screenshot shows the 'Signup' page of the K S School Of Business Management website. At the top, there are 'Login' and 'Home' buttons. Below them is a 'Enter Username' input field containing '123gmail.com'. To the right of the input field is an error message: 'Please fill out this field.' with an exclamation mark icon. There are three empty input fields below the username field. Underneath these is a 'Please select your designation:' dropdown menu with 'Faculty' selected. At the bottom is a green 'Sign Up' button.

=> If user will input incorrect email , then a message will generate for input correct email.

The screenshot shows the 'Signup' page of the K S School Of Business Management website. At the top, there are 'Login' and 'Home' buttons. Below them is a 'Enter Username' input field containing 'Nirav'. Below it is an 'Email' input field containing 'niravgmail.com'. To the right of the email input field is an error message: 'Please include an '@' in the email address. 'niravgmail.com' is missing an '@'.' with an exclamation mark icon. There are three empty input fields below the email field. Underneath is a 'Please select your designation:' dropdown menu with 'Faculty' selected. At the bottom is a green 'Sign Up' button.

2) Test Case (For Log In) :

=> If user will input incorrect username or password , then a message will generate for invalid username or password.

Chapter : 7 Summary

7.1 Assumptions :

- One should remember his Username and Password while login to the system.
- We assume that the system which prepared by us is easy to use for all end users.
- Our system having common language So anyone Can Easily Understand the System, So It Provides Ease of Access.
- Our system is very useful for the organization.
- We assume that user has primary knowledge of computer and this type of system.

7.2 Limitations :

- If user does not have knowledge about how to operate computer and system then he might get confuse.
- If the user might not able to deal with English language, then user might not able to use the system efficiently.
- This system is created using this organization constraints and conditions. For other organization constraints may be different.

7.3 Future Scope :

- This system is only useful for this organization but in future we can develop for any other institution by their constraints and condition.

7.4 Conclusion :

The project entitled as **Timetable Management System** is the system that deals with the issues related to a particular institution.

- This project is successfully implemented with all the features mentioned in system requirements specification.
- The application provides appropriate information to users according to the chosen service.
- The project is designed keeping in view the day-to-day problems faced by a college.
- Deployment of our system will certainly help the college to reduce unnecessary wastage of time in personally for the timetable creation.
